

## Lesson 4 Exercise (Python Keyboard Input)

1. Ensure you have viewed the video (associated with this exercise) at [this link](#).

If you are viewing a printed copy of this exercise locate the video on the YouTube channel either directly on the channel or via the supporting website.

2. Open up the Python GUI and enter the program shown below:

```
File Edit Format Run Options Windows Help
message = input('Please enter a message: ')
print (message)
```

3. Run the program and you should see the following screenshot.

```
File Edit Shell Debug Options Windows Help
Python 3.3.2 (v3.3.2:d047928ae3f6, May 16 2016)
Type "copyright", "credits" or "license()" I
>>> ===== RESTART
>>>
Please enter a message:
```

In response to the user friendly prompt enter the following text.

*He's not the Messiah, he's a very naughty boy!*

What was the program output?

4. Amend the program as requested below then save and run the program

```
File Edit Format Run Options Windows Help
message = input('Please enter a message: ')
print (message)
```

**Replace these single quotes with double quotes and run the program again.**

Did the program still work?

# The Basics

---

5. Write a program that asks a user to enter their name (use an input function). Then have it ask for the first line of their address (use another input function). Display their name on one line and their address on the next line.

*Make sure the program is user friendly (i.e. have prompts that guide the user on what they should be entering).*

**END**
